

Health, Environment and Safety

Human energy™

**How will you push yourself further?
How will you build on past accomplishments?**

At Chevron, we believe that the answer is collaboration – talented individuals like yourself working in concert with other exceptional professionals.

Every day, you'll use your expertise in health, the environment and safety to help deliver the energy people need globally – while taking care of our employees, our communities and our natural world.

*You'll find that even on
an ordinary day at
Chevron, you're part of
an extraordinary mission.*

Health, Environment and Safety

Qualifications

Occupational safety and health professionals hold a bachelor's or master's degree in safety sciences, industrial health and safety, occupational safety and health, or industrial hygiene, or a civil, chemical or mechanical engineering degree with an emphasis in safety or industrial hygiene.

Environmental professionals hold a bachelor's or master's degree or a doctorate in environmental engineering or hydrogeology, or a civil, chemical or mechanical engineering degree with an environmental emphasis.

Grow With Us: Career Opportunities

At Chevron, you'll find not just a job, but a career path as dynamic and rewarding as you choose to make it. We have made continuous learning an integral part of our culture, opening doors to new pursuits and new possibilities throughout the organization. Moreover, "Protecting People and the Environment" is a core Chevron value, so health, environment and safety professionals like you are key to our business.

Health, environment and safety professionals new to Chevron receive general business training, technical training, and mentoring through the Horizons early career development program. You will typically spend your first five years in a variety of positions, expanding your expertise and general knowledge of the oil industry and related health, environment and safety issues. After that, several career paths, with opportunities around the world, are open to you:

- Operations – managing health, environment and safety issues in Chevron's domestic or international oil production facilities, fueling operations, chemical plants and oil refineries
- Project management – managing health, environment and safety issues in Chevron's major capital projects around the world
- Technical consulting – providing technical expertise within one of Chevron's technology-management companies
- Business planning and analysis, facilities engineering, and other areas outside of health, environment and safety

Locations

Typically, health, environment and safety professionals start at the following locations across the United States:

Chevron North America Exploration and Production

- Bakersfield, California
- Lafayette, Louisiana
- New Orleans, Louisiana
- Houston, Texas
- Midland, Texas

Chevron International Exploration and Production

- San Ramon, California
- Houston, Texas

- Salt Lake City, Utah

Chevron Energy Technology Company

- Richmond, California
- Houston, Texas

Chevron Environmental Management Company

- Bakersfield, California
- San Ramon, California
- Houston, Texas

Duties and Responsibilities

During your first year, you will join a team of health, environment and safety professionals either in an operation, in a technical services organization, or on a headquarters staff. You will help to create the culture that delivers exceptional performance with respect to health, environment and safety.

Occupational Safety and Health Professional

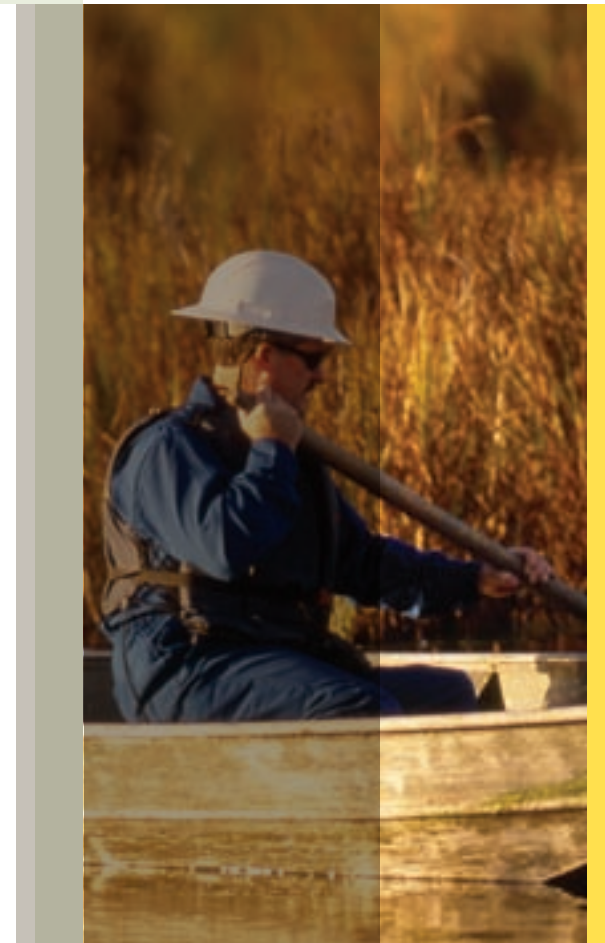

Your responsibilities will vary depending on your position, but in general, you will:

- advise on safety and industrial hygiene regulatory requirements and best practices
- develop safety procedures and guidelines
- conduct safety inspections and audits
- conduct exposure assessments and monitoring
- evaluate and address ergonomic risks
- advise on strategies to improve safety and health performance
- design and deliver safety and industrial hygiene courses
- work to ensure compliance

Environmental Professional

Your responsibilities will vary depending on your position, but in general, you will:

- advise on environmental regulatory requirements and best practices
- work with regulatory agencies to obtain permits
- develop environmental procedures and guidelines
- conduct emissions modeling for air, waste or water
- perform studies to estimate and reduce emissions
- implement waste management programs
- assess and manage environmental, social and health impacts
- assess control technology
- remediate contaminated sites
- work to ensure compliance

Human energy™

You'll find that even on an ordinary day at Chevron, you're part of an extraordinary mission.
